

## BUILD A DIORAMA OF THE CITY OF JERICHO

### **Materials Needed**

Paper, cardboard, pipe cleaners or popsicle sticks, tissue paper, scissors, sand, glue, paints and paintbrushes

### **Build the city**

- Decide how large your completed model will be. Make houses to fit your model size.
- Cut a piece of paper into a square or rectangle.
- Draw lines (*the height of the wall*) in from each edge of the paper, as shown. Fold along each of these lines.
- Cut along dotted lines as shown.
- Draw windows and doors on the sides. Then fold sides down.
- Glue corners to make flat-roofed houses.
- The houses can be painted. Make as many houses as you want.

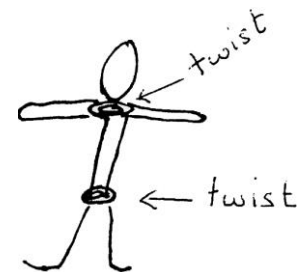

### **Make the wall**

- Cut a strip for the wall from some cardboard, long enough to surround the city. (You will probably have to join pieces.)
- Draw a gate in the wall. The wall can be painted.
- When it is time to set up the city, bend the wall to make corners, and surround the city with it.

### **Make the people**

- Make pipe-cleaner people or use  $\frac{1}{2}$  popsicle sticks. Bend the pipe cleaners as shown.
- Use tissue paper to make clothes cut small rectangles of tissue paper; make a small cut for the head to go through.
- Tie the garments around the waist with a thin cord, thread or colorful pipe-cleaner.

### **Display the scene**

Here are some ideas for displaying your scene:

- Place the city on a large tray, or a flat piece of cardboard.
- Paint the cardboard OR put a thin layer of glue on it and sprinkle it with sand.
- Make a small "sandbox" by filling a box lid with sand. Then set up your scene in the sandbox.
